

A unique **easy to use & powerful** cloud based digital signage solution for video, images, social feeds and live data for any Out-of-Home digital signage application.

Cloud Based Management

Update and manage your signage from anywhere around the world from your PC, Phone or Tablet

Simple & Easy Web Interface

Manage content, media, scheduling and settings using our simple easy to use web interface

Advanced Scheduling

Schedule playlists based on day, date or time. Trigger schedules from live parameters - such as weather reports and interactivity

24/7 Remote Monitoring

Monitor uptime, connectivity status and what's currently showing on your screens. Receive monitoring and status email alerts

Customisable & Scaleable

Our development team can customise and build add-ons to the system to integrate with any requirements. Create custom inputs, interfaces and triggers from your data and needs

Universal Display Compatibility

Specifically designed to work with all forms and formats of digital signage from flat screen televisions to video walls & LED screens

Reliability & Hardware

Use our DisplayEngine Signage Player, built for reliability and performance. While our system is internet connected any interruption to this connection will not affect the playback of your content as all schedules and media are stored on the player.

Playback Anything...

Elegantly play images and video with smart cross-fade transitions out of the box. Customisable bolt on modules include social media, scrolling text, RSS feeds, live data & live video.

24/7 Total Support

DisplayEngine is developed and maintained by YSLV one of the UK's leading display solutions providers. Backed by YSLV's 24/7 technical helpline, remote IT support and UK service and monitoring centre. Our experience with screen hire & sales since 1997 allows us to understand your requirements, the software setup and display aspects to digital signage.
